*The Ideal Central Access
Point for teleworkers*

The MultiTron 19" Rack System offers a reliable and manageable solution for the problems of modern network providers. A single rack can contain up to sixteen analogue modems operated by one computer terminal via the Modem Management Unit.

In addition, up to fifteen MultiTron Rack Systems can be linked together and operated. With this central operation, the organisation of the modem fleet is simplified considerably. Line speed, error detection, compression protocol, online information - with one press of a button all this vital status information is visible to the system operator.

In short, it is indispensable for individuals who demand security and have an eye for fast and reliable data communication.
